Press Release

ELESYS Awarded Excellence in Workplace Safety and Health by the U.S. Department of Labor's Occupational Safety and Health Administration (OSHA). *Elesys is one of 12 companies in Georgia that have earned the prestigious designation of Safety and Health Achievement Recognition Program (SHARP) for 2009.*

SUWANEE, Georgia, February 25, 2009 –ELESYS North America Inc., automotive electronic safety systems, is honored to receive OSHA's Safety and Health Achievement Recognition Program (SHARP) award for excellence in workplace safety and health. ELESYS manufactures its highly competitive automotive electronic safety systems products at its headquarters in Suwanee, Georgia.

ELESYS' automotive electronic safety systems are featured in a variety of vehicle models, including SUVs and passenger cars, for several vehicle manufacturers in North America. With a 5-Star crash rating given to several vehicles equipped with its automotive electronic safety systems millions of drivers can rely on ELESYS' passive and active safety systems: Occupant Sensing System (SeatSentry™), Passenger Sensing Systems, Occupant Passenger Detection System, Airbag Sensors and Controllers, Adaptive Cruise Control, All-Terrain Vehicle Transmission Controls, Anti-Lock Brakes, Electronic Power Steering, Traction Control System, and Vehicle Stability Controls. ELESYS has proven it delivers a high standard of quality.

To be considered for the SHARP award a company must meet all of OSHA's requirements, some of which include having corrected "all safety and health hazards, and involve employees in the development, implementation, and operation of all elements necessary for effective safety and health programs," and a Lost Workday Incidence Rate (LWDI) and an Injury Incidence Rate (IIR) that are below the national average for its industry (for a period spanning no less than a year). ELESYS achieved excellence in all of these requirements to be recognized with the SHARP award. In addition to receiving the award, ELESYS will be exempt from general scheduled inspections for one year and receive a certificate of recognition signed by the Assistant Secretary of Labor-OSHA.

"This is our third year in a row for this recognition. It only strengthens our company philosophy that safety is our success, and we are a company that is proud of our record of providing advanced safety systems to automotive passengers worldwide and by providing our associates a workplace that is one of Georgia's, if not the United States, safest workplaces" says Mike Price, ELESYS Human Resources and Administration Manager. The safety management team and employees at ELESYS work together to ensure its facilities and equipment operate at their maximum efficiency and effectiveness – without compromising high standards in safety and
